

Effects of KRR Fixed PWT on Boiler Parameters

SH Steam Flow [0-100] % → [0 ; 100 000] Kg/h Flue Gas Back End Temperature

Comments: Following the installation of KRR Fixed PWT to maintain boiler cleanliness, clear benefits can be observed:

- Back End Temperature reaches the critical value (straight red line) less frequently. This means that boiler efficiency improved.
- Unplanned shut down (to carry out emergency maintenance work on the boiler) are significantly reduced. This means increased via optimised waste processing capacity and electricity export.
